Remote Sensing of Ice and Snow (Remote Sensing Applications) Dorothy Hall

Remote sensing using aircraft and satellites has helped to open up to intensified scientific scrutiny the cold and remote regions in which snow and ice are prevalent. In this book, the utility of remote sensing for identifying, mapping and analyzing surface and subsurface properties of worldwide ice and snow features is described. Emphasis is placed on the use of remote sensing for developing an improved understanding of the physical properties of ice and snow and understanding the interrelationships of cryospheric processes with atmospheric, hydrospheric and oceanic processes. Current and potential applications of remotely sensed data are also stressed. At present, all-weather, day and night observations of the polar regions can be obtained from sensors operating in different portions of the electromagnetic spectrum. Because the approaches for analysis of remotely sensed data are not straightforward, Chapter 1 serves to introduce the reader to some of the optical, thermal and electrical properties of ice and snow as they pertain to remote sensing. In Chapter 2 we briefly describe many of the sensors and platforms that are referred to in the rest of the book. The remaining chapters deal with remote sensing of the seasonal snow cover, lake and river ice, permafrost, glacier ice and sea ice.

From reader reviews:

Carman Robertson:

The experience that you get from Remote Sensing of Ice and Snow (Remote Sensing Applications) is a more deep you searching the information that hide into the words the more you get considering reading it. It does not mean that this book is hard to know but Remote Sensing of Ice and Snow (Remote Sensing Applications) giving you buzz feeling of reading. The author conveys their point in particular way that can be understood simply by anyone who read the item because the author of this reserve is well-known enough. This book also makes your vocabulary increase well. Making it easy to understand then can go along, both in printed or e-book style are available. We suggest you for having this Remote Sensing of Ice and Snow (Remote Sensing Applications) instantly.

Daniel Watkins:

You could spend your free time to read this book this reserve. This Remote Sensing of Ice and Snow (Remote Sensing Applications) is simple to bring you can read it in the park, in the beach, train as well as soon. If you did not have got much space to bring often the printed book, you can buy typically the e-book. It is make you easier to read it. You can save often the book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.

Henry Stehle:

This Remote Sensing of Ice and Snow (Remote Sensing Applications) is brand new way for you who has intense curiosity to look for some information as it relief your hunger of information. Getting deeper you in it getting knowledge more you know otherwise you who still having tiny amount of digest in reading this Remote Sensing of Ice and Snow (Remote Sensing Applications) can be the light food in your case because the information inside this specific book is easy to get through anyone. These books create itself in the form that is reachable by anyone, that's why I mean in the e-book form. People who think that in reserve form make them feel sleepy even dizzy this guide is the answer. So there is not any in reading a guide especially this one. You can find actually looking for. It should be here for you. So , don't miss the item! Just read this e-book variety for your better life and also knowledge.

Blanche Jackson:

Don't be worry should you be afraid that this book will filled the space in your house, you can have it in e-book technique, more simple and reachable. This specific Remote Sensing of Ice and Snow (Remote Sensing Applications) can give you a lot of friends because by you investigating this one book you have matter that they don't and make you actually more like an interesting person. This particular book can be one of one step for you to get success. This book offer you information that maybe your friend doesn't understand, by knowing more than various other make you to be great people. So , why hesitate? Let's have Remote Sensing of Ice and Snow (Remote Sensing Applications).
