Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics)

Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics)

Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics)

The book reports on the current state on HCI in biomedicine and health care, focusing on the role of human factors, patient safety well as methodological underpinnings of HCI theories and its application for biomedical informatics. Theories, models and frameworks for human-computer interaction (HCI) have been recognized as key contributors for the design, development and use of computer-based systems. In the clinical domain, key themes that litter the research landscape of health information technology (HIT) are usability, decision support and clinical workflow – all of which are affected directly or indirectly by the nature of HCI. While the implications of HCI principles for the design of HIT are acknowledged, the adoption of the tools and techniques among clinicians, informatics researchers and developers of HIT are limited. There is a general consensus that HIT has not realized its potential as a tool to facilitate clinical decision-making, the coordination of care and improves patient safety. Embracing sound principles of iterative design can yield significant dividends. It can also enhance practitioner's abilities to meet "meaningful use" requirements. The purpose of the book is two-fold: to address key gaps on the applicability of theories, models and evaluation frameworks of HCI and human factors for research in biomedical informatics. It highlights the state of the art, drawing from the current research in HCI. Second, it also serves as a graduate level textbook highlighting key topics in HCI relevant for biomedical informatics, computer science and social science students working in the healthcare domain. For instructional purposes, the book provides additional information and a set of questions for interactive class discussion for each section. The purpose of these questions is to encourage students to apply the learned concepts to real world healthcare problems.?

From reader reviews:

Adam Schneider:

Why don't make it to be your habit? Right now, try to ready your time to do the important act, like looking for your favorite reserve and reading a guide. Beside you can solve your problem; you can add your knowledge by the e-book entitled Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics). Try to face the book Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics) as your friend. It means that it can to become your friend when you experience alone and beside that course make you smarter than previously. Yeah, it is very fortuned to suit your needs. The book makes you far more confidence because you can know anything by the book. So , let me make new experience and also knowledge with this book.

Gene Lyons:

Information is provisions for individuals to get better life, information these days can get by anyone with everywhere. The information can be a expertise or any news even an issue. What people must be consider when those information which is inside former life are challenging be find than now's taking seriously which one would work to believe or which one typically the resource are convinced. If you find the unstable resource then you get it as your main information there will be huge disadvantage for you. All those possibilities will not happen with you if you take Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics) as the daily resource information.

Michael Sherman:

People live in this new moment of lifestyle always make an effort to and must have the free time or they will get great deal of stress from both lifestyle and work. So , once we ask do people have spare time, we will say absolutely yes. People is human not a robot. Then we ask again, what kind of activity have you got when the spare time coming to an individual of course your answer can unlimited right. Then do you try this one, reading ebooks. It can be your alternative within spending your spare time, often the book you have read is usually Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics).

Adam Hay:

The book untitled Cognitive Informatics for Biomedicine: Human Computer Interaction in Healthcare (Health Informatics) contain a lot of information on it. The writer explains the woman idea with easy method. The language is very simple to implement all the people, so do not necessarily worry, you can easy to read this. The book was written by famous author. The author brings you in the new era of literary works. It is easy to read this book because you can read more your smart phone, or product, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site as well as order it. Have a nice go through.
