## Origin, Evolution and Biogeographic History of South American Turtles (Springer Earth System Sciences) Marcelo de la Fuente, Juliana Sterli, Ignacio Maniel

The extended continental South American turtle record (Norian to Lujanian) allows us to follow the evolution of this reptile clade from its origins. Several significant stem turtle taxa such as: *Palaeochersis talampayensis* and *Condorchelys antiqua* provide information on the first steps of turtle evolution. Others such as: *Chubutemys copelloi* or *Patagoniaemys gasparinae* provide clues to the origin of the bizarre horned tortoises of the clade Meiolaniidae. The panpleurodiran species such as *Notoemys laticentralis* or *Notoemys zapatocaensis* shed light on the origin of modern pleurodiran turtles. This book explores aquatic and terrestrial cryptodiran turtles, South Gondwana pleurodiran turtles, North Gondwana pleurodiran turtles; Meiolaniforms and early differentiation of Mesozoic turtles.
